State Biotechnological University

*Наведено функціональний аналіз величин обсягів різних видів виробленої енергії комбінованої системи енергопостачання*

Taking into account the methodological aspects of the development of energy balances of the unified energy supply system (USEP), its structural and parametric scheme [1, 2] has been improved, according to which the volumes of different types of energy will be presented in the form of functions  $Y_y = f(x_1, x_2, x_3 \dots x_n)$  from variable parameters  $x_i$ .

$$A_{\Sigma} = \begin{bmatrix} Y_1 = Y_1'' + Y_1' + Y^* - Y_1^* - Y_3^* - Y_4^* - Y_5^* - Y_6^* \\ Y_2 = Y_2'' + Y_2' - Y_2^* \\ Y_3 = Y_3'' + Y_3' \\ Y_4 = Y_2^* + Y^* + \Delta Y_3^* - \Delta Y_2^* \\ Y_5 = Y_3^* - \Delta Y_3^* \\ Y_6 = Y_4'' + \Delta Y_4' + \Delta Y_{42}' + \Delta Y_{44}' + Y_4^* + Y_5^* + Y_6^* \end{bmatrix} = [\sum_1^6 Y_i] \quad (1)$$

The study of the dependence of the change in the volume of different types of energy  $Y_i$  on the value of the variable parameters ( $x_i$ ) determines the conditions for making a decision on the selection (improvement, etc.) of the technical parameters of the devices of the local power supply system using AES (LSAES), for example:

a) electrical energy:  $Y_1 = f(k_1, U, I, R, \cos\varphi, \tau_1), \quad (2)$

b) thermal energy:  $Y_2 = f(k_2, m, c, \Delta Q, \tau_2), \quad (3)$

c) fuel energy for ICE:  $Y_3 = f(k_3, \sigma_e, P_e, \tau_3), \quad (4)$

d) thermal energy of hot heat supply:  $Y_4 = f(k_4, m, c, \Delta Q, \tau_4), \quad (5)$

The functional dependencies of the volumes of various types of energy produced by CESS allow in the design process to make a decision regarding the selection or improvement of energy installations and devices of LSAES.
